github.com/vikash1602

Professional Summary

Full Stack Developer with expertise in React, Django, Python, JavaScript, and AWS, specializing in building scalable, responsive web applications and integrating machine learning solutions into production systems. Seeking to leverage full-stack development skills, ML implementation capabilities, and business acumen to deliver data-driven enterprise solutions that create measurable impact and drive digital transformation.

Experience

QSpiders, Bengaluru, India
Full Stack Development Intern (Summer Internship)
June 2025 – August 2025

- Engineered a full-stack weather forecasting web application using Python, Flask, HTML, CSS, JavaScript, and integrating OpenWeatherMap API to deliver real-time weather data .
- Implemented comprehensive error handling, input validation, reducing runtime errors by 30% improving application stability for end users and reducing API processing time by 18%.
- Collaborated with 3 interns using Github workflows (feature branching, pull requests, code reviews), resolving 12+ merge conflicts while maintaining zero production bugs.
- Delivered 5 technical presentations documenting development progress, API design patterns, and system architecture across project milestones.
- Incorporated mentor feedback to refactor 200+ lines of code and enhance design quality, improving code maintainability and overall application reliability.

Education

Bachelor of Engineering (B.E.) in Computer Science Engineering
Er. Perumal Manimekalai College of Engineering *2022 – May 2026*
Current CGPA: 8.65 / 10.0

Relevant Coursework : Data Structures & Algorithms, Database Management Systems, Web Technologies, Software Engineering, Machine Learning, Computer Networks

Technical Skills

- **Programming Languages**: Python, Javascript, SQL .
- **Web Technologies**: HTML5, CSS3, React, Django, REST APIs .
- **Libraries Frameworks**: OpenCV, Tensorflow, Scikit-learn, Pytest .
- **Databases**: MySQL
- **Tools / Platforms**: Github, AWS, VS Code, CLI
- **Domains**: Full Stack Development, Data Science, Machine Learning Algorithms

Projects

CardioXAI: Explainable AI for Cardiovascular Disease Prediction | *Python, Machine Learning, Explainable AI (XAI), SHAP, HTML5, CSS3, JavaScript*

– Developed a web-based cardiovascular disease prediction platform with an interactive interface to assess risk factors and display prediction results.

– Integrated explainable AI visualizations to highlight key contributing risk factors, making prediction results more interpretable and supporting informed health-related decision-making.
– Implemented responsive UI components using HTML, CSS, and JavaScript to present cardiovascular risk information and improve accessibility across devices.

Tata Data Visualization Simulation | *Data Analytics, Power BI, Business Reporting, Excel Sheets*

– Analyzed 50,000+ transaction records from retail dataset using Excel, identifying revenue trends, customer segments, and seasonal patterns that informed strategic decision-making.
– Designed and built 3 interactive Power BI dashboards for C-suite executives, visualizing KPIs including revenue growth (YoY), customer retention rates, and regional performance metrics.
– Formulated 8 data-driven business questions and recommendations for stakeholders, simulating real-world client presentation scenarios and business consulting workflows.

Enhanced Haar Cascades for Face Detection | *Python, OpenCV, Computer Vision*

– Engineered an optimized face detection system using OpenCV Haar Cascades, systematically tuning `scaleFactor`, `minNeighbors`, and `minMaxSize` parameters to reduce false positive rate by 18% compared to default configurations.
– Conducted rigorous testing across 2,000+ images with varying lighting conditions, achieving 90% detection accuracy and 89% precision on WIDER FACE and FDDB dataset.

Certifications & Achievements

- **AWS Academy Graduate – Cloud Architecting (2025)**
  Hands-on training in VPC design, EC2, S3, RDS, Load Balancing, IAM security, CloudWatch monitoring, and scalable cloud architecture implementation.
- **2nd Prize Winner & Published Paper – Optimized Haar Cascade Algorithm through Parameter Fine-Tuning for Accurate Face Detection (2025)**
  Presented research on improving detection accuracy through parameter tuning; Paper published in International Research Journal of Computer Science (IRJCS), Vol. 12, Issue 09 .
- **CS50P – Harvard's Introduction to Programming with Python (2024)**
  Mastered Python fundamentals, OOP, file I/O, and testing through 10 problem sets and final project.
- **Tata Data Visualization Simulation – Forage (2023)**
  Completed simulation covering data analytics, dashboard design, and executive reporting using Power BI and Excel.
